Moxie

YOUR BOAT'S DIGITAL HOME

Brand Guide & Design Reference

April 2026 · For Claude Design Import

Brand *Context*

Essential brand positioning and audience context for anyone designing Moxie materials.

Moxie is a premium marine technology and services company building the digital identity layer for yachts and vessels. The core product is a QR-based "digital dry bag" — a persistent digital profile for every boat, accessible by scanning a weatherproof sticker on the hull. Think of it as the boat equivalent of a car's glove box, but digital, always current, and role-gated by who scans it.

Who *we serve*

Moxie's primary customers are affluent yacht owners — typically high-net-worth individuals who own vessels valued at \$150K–\$2M+. These are people who expect the same digital sophistication from their boating experience that they get from

luxury automotive, private aviation, or premium real estate. They are accustomed to brands like Hermès, Porsche, and Four Seasons. Design that looks "tech startup" or "SaaS dashboard" will immediately feel wrong to this audience.

Secondary customers include marina operators (enterprise B2B), yacht brokerages, marine title/escrow companies, and yacht clubs. These audiences expect professionalism and authority, not playfulness.

Brand *personality*

Moxie should feel like a private yacht club's concierge desk, not a tech company's landing page. The brand sits at the intersection of nautical heritage and modern digital precision. It is confident and quiet — never shouty, never gimmicky. The gold-and-navy palette evokes brass hardware, teak decks, and midnight water. Typography is editorial and elegant, with serif headings that feel like a luxury lifestyle magazine, not a startup pitch deck.

Key brand attributes: **Authoritative. Elegant. Trustworthy. Premium. Maritime.**

What Moxie is NOT: playful, techy, startup-y, casual, minimalist-corporate, or Silicon Valley. Never use rounded sans-serif logos, gradient backgrounds, or tech-bro aesthetics.

The *digital dry bag*

Moxie's signature product is the QR sticker system. A single weatherproof vinyl sticker goes on the stern, dock box, or companionway of a vessel. When scanned, it shows a role-gated digital profile: the general public sees vessel specs, the marina operator sees emergency contacts and insurance, the owner sees everything and can edit. Coast Guard and first responders see critical safety data.

This QR sticker is a physical branding touchpoint that lives on \$200K+ yachts. It must look premium — it sits alongside the vessel's name decal and hull graphics. Think of it as jewelry for the boat, not a shipping label.

Geographic *context*

Moxie is headquartered in Northern California, with initial deployment in the San Francisco Bay Area — specifically Emery Cove Marina (Emeryville) and Sausalito/Clipper Yacht Harbor. The Bay Area yachting community is affluent, environmentally conscious, and tech-literate but design-discerning. Future expansion targets the Pacific Northwest and Florida.

Competitive *positioning*

There is no direct competitor doing what Moxie does. The closest analogs are BoatCloud (basic vessel documentation) and YachtWorld (listings marketplace). Both are utilitarian and ugly. Moxie's design advantage is a core differentiator — the brand should feel like it belongs next to Boat International magazine, not next to a government registry website.

Color *Palette*

The Moxie palette is anchored in deep navy and warm gold — evoking brass fittings, midnight water, and heritage yacht clubs. Extended with warm creams and functional accent colors.

Typography

Moxie uses two typefaces: Cormorant Garamond for display/editorial headings and DM Sans for body/UI text. The pairing creates a luxury editorial feel — think Boat International, not TechCrunch.

DISPLAY — CORMORANT GARAMOND

Google Fonts: `Cormorant+Garamond:ital,wght@0,300;0,400;0,600;1,300;1,400`

LIGHT 300 · 13PX · SECONDARY BODY, FEATURE DESCRIPTIONS

As of January 1, 2025, all motorized vessel operators must carry a California Boater Card. Store your copy in Moxie so it's always with the boat.

TYPOGRAPHY RULES

Headlines: Always Cormorant Garamond. Use Light 300 weight for large display. Italic for emphasis and vessel names. Gold accent on key words using `<em>` or `<span>` styling.

Body text: Always DM Sans. Never use Cormorant for body paragraphs. Default weight is 400 at 14–15px with generous line-height (1.7–1.8).

Labels/eyebrows: DM Sans Medium 500, 10–11px, heavy letter-spacing (0.16–0.22em), always uppercase. Often flanked by gold dashes or decorative lines.

Vessel names: Cormorant Garamond Light Italic. Always italic. This is the editorial "boat name" treatment used across all touchpoints.

CTAs/buttons: DM Sans, 11–12px, uppercase, letter-spacing 0.12–0.18em. Font-weight 500–600.

Logo & *Wordmark*

The Moxie wordmark is purely typographic — Cormorant Garamond, Regular 400, Italic. The "M" is rendered in gold, the rest in the appropriate contrast color. No icon, no symbol — the type IS the brand.

WORDMARK WITH TAGLINE

"POWERED BY" BADGE

QR Code *Design*

The QR code is Moxie's primary physical touchpoint. It appears on yacht hulls, dock boxes, and marketing materials. Three colorway treatments are defined.

QR COLORWAYS

QR STICKER MOCKUPS

QR Code Specs: Error correction Level H (survives 30% damage — critical for marine environment). Print size 3"×3" minimum at 600px. Dark cell color: #071020 (navy-deep). Sticker format: weatherproof vinyl with rounded corners (10–14px radius). "Moxie" text below QR grid in uppercase DM Sans or Cormorant italic.

Vessel Profile *Mockup*

The mobile vessel profile is the #1 user-facing touchpoint — what people see when they scan the QR. This is the reference layout showing Discovery One (2023 Nimbus T8).

Standard button styles, badge treatments, and interactive patterns used across Moxie touchpoints.

FORM FIELD BADGES

REQUIRED

OPTIONAL

PRIVATE

AUTO-FILLED

DECORATIVE PATTERNS

Gold radial glow: Used as subtle background decoration on navy sections. `radial-gradient(circle, rgba(201,168,76,0.06-0.12) 0%, transparent 70%)` — positioned top-right or offset for asymmetry.

Gold line accents: Thin gold lines (`rgba(201,168,76,0.35)`) used as dividers, eyebrow flanking dashes, and animated underlines on hover.

Glass nav: Navigation uses `backdrop-filter: blur(12px)` with semi-

transparent cream background `rgba(245,242,236,0.92)`.

Card hover treatment: Cards on dark backgrounds use a gold line that scales from left on hover: `transform: scaleX(0) → scaleX(1)` with gold background.

Border radius: Large cards use 12–16px radius. Badges/pills use 20px. Stickers use 10–14px. Phone mockup uses 36px. No sharp corners anywhere in the UI.

Design *Rules*

Do

Use Cormorant Garamond italic for all vessel names. Use generous whitespace — let the design breathe. Pair navy backgrounds with gold accents. Use the cream palette for light sections (never pure white backgrounds on full pages). Keep buttons uppercase with wide letter-spacing. Use editorial photography language (if/when imagery is used). Think Boat International, Robb Report, Condé Nast Traveller.

Don't

Never use gradients (except the subtle gold radial glow). Never use rounded sans-serif logos or "tech startup" aesthetics. Never use emoji in formal materials. Never use Inter, Roboto, or system default fonts for headings. Never put the wordmark in anything other than Cormorant Garamond Italic. Never use the gold as a full background color (except for QR sticker variant). Never use navy text on

navy backgrounds. Never crowd the layout — if it feels like a SaaS dashboard, it's wrong.

Key *terminology*

"Digital dry bag" — the official product metaphor. Never use "digital glove box" (deprecated). A dry bag is what sailors use to keep critical documents safe on a boat — it's the perfect metaphor for what Moxie does digitally.

"Vessel profile" — not "boat page" or "listing." Moxie profiles are persistent identities, not marketplace listings.

"Moxie" — always capitalized. Never "MOXIE" in all-caps except in QR sticker labels where it's part of the uppercase design language.

PART II

Addendum v1.

Marks, Aqua, Applications.

The v1 extension to the foundation above. Introduces the two-mark family (Anchored M + Pixel M), defines aqua as a four-role system (Lagoon, Bright, Vapor, Abyss), and provides production specs for hull, print, and digital applications.

BRAND ADDENDUM · V1.0

A *heritage* A *signal* for everything *digital.*

This addendum extends the Moxie brand system with two new marks and a four-role aqua accent. Navy and gold remain the foundation. What follows is the specification for how the marks and colors deploy together — on the dock, on stationery, on the hull, and in the product.

EFFECTIVE APRIL 2026 ADDENDUM TO BRAND GUIDE V1.0

*Do &
Don't*

01 — MARK FAMILY

Two marks. *One spirit.*

Moxie's identity is now carried by three elements working together: the italic *Moxie* wordmark (unchanged), the **Anchored M** heritage seal, and the **Pixel M** digital signal. The seal is ceremonial — it appears on things that last. The signal is operational — it appears on things that update.

PRIMARY · HERITAGE SEAL

The Anchored M

MOXIE-MARK-01 · CEREMONIAL

Patches. Hull decal trim. The

SECONDARY · DIGITAL SIGNAL

The Pixel M

MOXIE-MARK-02 ·
OPERATIONAL

App icon. Favicon. QR sticker
branding. Scan-confirmation
moments. In-app chrome. The

Anchored M carries weight and permanence — it is used where ceremony matters and where the object will outlive a product cycle. Never animated. Never aqua.
— *to be earned, not issued* —

Pixel M is the mark of the product itself — it can animate (the aqua "signal" pixel blinks on scan), and it appears wherever the digital dry bag lives.

— *active, updating, alive* —

When in doubt, which mark? Ask: will this object still exist in ten years? If yes, *Anchored M*. Will it ship, update, or refresh? If yes, *Pixel M*. The italic *Moxie* wordmark can accompany either, but the two marks never appear in the same lockup. They are siblings, not twins.

02 — CONSTRUCTION & CLEAR SPACE

Drawn to *a grid*.

Both marks are built on a 100-unit square grid. The "x" unit (1/10 of the mark's width) governs stroke, corner radii, and clear space. Respect the grid; don't redraw by eye.

1x = 10% width		1x = 1 module	
MARK 01 · ANCHORED M		MARK 02 · PIXEL M	
Construction		Construction	
Stroke weight	2.4 units (primary M)	Module size	10 × 10 units

03 — AQUA SYSTEM

Four shades, *four jobs*.

Aqua is never decorative. Each of the four approved shades has a specific role. The rule: pick the role first, then the color follows. Never combine two aquas in the same composition — they fight rather than harmonize.

01 Lagoon INSTITUTIONAL #1FA394 · oklch 0.62 0.11 186 The "daytime" aqua — dignified, slightly muted. Reads as confident without being loud.	02 · PRIMARY Bright SIGNAL #17C3B2 · oklch 0.72 0.13 182 The default Moxie aqua. Confident, alive, consistent across print and screen.	03 Vapor LIVE STATE · SCREEN ONLY #13F1D1 · oklch 0.86 0.17 177 Only for moments of active feedback on a screen. Never printed — it will not render faithfully. Use for: Scan-	04 Abyss DEPTH & SHADOW #0B6E6A · oklch 0.44 0.08 188 The partner shade to Bright. Used for depth, typography on aqua fields, and tonal backgrounds.
---	---	--	---

Use for: Marina

partner co-branding, printed collateral, dashboard chart accents, "verified by Moxie" badges.

Use for: Merch, CTAs, hull decal

accents, social graphics, the aqua pixel in the Pixel M, anywhere a single accent color is needed.

success animations, "just updated" indicators, notification pulses, hover states on interactive elements.

Use for: Text on Bright aqua, duotone gradients (Navy → Abyss), tertiary UI surfaces, subdued backgrounds.

CONTEXT & ROLE MATRIX

CONTEXT	PRIMARY AQUA	WHY
Marina partner page (web)	Lagoon	Institutional trust; co-brand with B2B partners without overpowering
CTA button on moxie.com	Bright	Default accent; recognizable signal
QR "scanned successfully" animation	Vapor	Digital-only moment of feedback
Dashboard chart line	Lagoon	Readable over long viewing sessions; not fatiguing
Pixel M signal pixel	Bright	The one aqua pixel must be the canonical Moxie aqua
Hull decal accent trim	Bright	Printed; must match across vinyl runs and UV aging
Duotone photography overlay	Abyss + Navy	Depth + brand cohesion; leaves gold available for text
Crew tee embroidery thread	Bright	Thread color #17C3B2 ≈ Madeira Polyneon 1849 / DMC 959

Error state on form	— none —	Use the existing red functional color; aqua is never an error color
Printed brochure page color	Lagoon	Prints more faithfully than Bright; avoids blotchy coverage

AQUA IN COMPOSITION

BRIGHT · SIGNAL

Every vessel
deserves an identity.

The default hero composition: navy ground, gold wordmark accent, Bright aqua as the word that carries the emotion.

LAGOON · INSTITUTIONAL

For marinas. For the long term.

Partner-facing surfaces use Lagoon as the ground color. White typography with gold accents. Reads as authoritative.

VAPOR · LIVE

Scanned.
Confirmed.

Vapor appears only in moments of active feedback — typically as a pulse, a dot, or a momentary flash. Never static.

ABYSS · DEPTH

Quiet tones. Deep water.

Abyss holds type on Bright aqua, builds duotone overlays on imagery, and supplies a subdued aqua that prints reliably.

The marks, *on the water.*

Five production-ready applications covering both marks and all four aqua roles. Each includes the canonical preview and the manufacturing spec.

APPLICATION 01

App Icon · iOS & Android

PIXEL M · PRIMARY

SPECIFICATION

Background	Navy gradient #0D1F35 → #0A1828 (160°)
Mark color	Gold #C9A84C · corners at 55% opacity
Signal pixel	Bright Aqua #17C3B2
Corner radius	22.5% (iOS superellipse)
Mark size	62% of icon canvas
Export sizes	1024 · 512 · 180 · 152 · 120 · 87 · 76 · 60 · 40 px

On scan-success, the signal pixel animates: fades from #17C3B2 → #13FID1 (Vapor), grows 2×, then returns.

Reserved for in-product moments only.

APPLICATION 02

Hull Decal / QR Sticker

PIXEL M + WORDMARK

SPECIFICATION

Substrate	3M IJ180Cv3 with 8518 gloss overlamine
Size	3" × 3" standard · 4" × 4" premium
QR error correction	Level H (30% damage tolerance)
Dark cell	Navy Deep #071020
Signal cell (bottom-right)	Bright Aqua #17C3B2 — 1 module
Gold rule	#C9A84C at 0.4 pt · divides QR from caption
Typography	Cormorant italic (brand) · DM Sans Medium (caption)

Corner radius10–14 px

The single aqua module in the bottom-right corner of the QR mirrors the Pixel M's signal pixel — subtle enough not to disrupt scan integrity, unmistakable as a Moxie artifact once you know to look.

APPLICATION 03

Business Card · Founder / Exec

ANCHORED M · HERITAGE

SPECIFICATION

Stock	Mohawk Superfine 130C · eggshell
Dimensions	3.5" × 2" · 1mm edge paint (Bright Aqua)
Front	Navy base, gold foil mark + accent rule, white type
Back	Cream, blind- emboss Anchored M (3mm deboss)
Accent rule	Gold 60% / Bright Aqua 40% split
Print method	Offset + hot foil stamp +

blind emboss

The Anchored M is blind-embossed on the back — it *feels* before it reads. This is the only surface where the mark is touchable; treat it with reverence.

MOXIE.SH

05 – DO & DON'T

Six failure modes to watch for. Each one we've seen attempted; each one breaks the system in a specific, avoidable way.

Page 32 of 34

ANCHORED M IN AQUA

The heritage seal lives in gold or navy only. Aqua on the seal erodes the "permanent object" signal. Aqua belongs to the Pixel M.

AQUAS

One aqua per composition. Lagoon + Vapor vibrate. Pick the role first, then the single aqua that fits — never mix.

ERROR COLOR

Errors use the existing red functional accent. Aqua signals "active, alive, good" — never trouble.

NEVER PRINT VAPOR

#13F1D1 is a screen-only color. It can't be printed reliably on vinyl, paper, or fabric. For physical media, default to Bright.

NEVER LOCK THE TWO MARKS TOGETHER

They're siblings, not twins. Pick one per surface. Using both in a single lockup creates a redundancy that reads as indecision.

NEVER STRETCH, SKEW, OR ROTATE

Both marks are drawn on a grid. Scale proportionally only. No 3D effects, no drop shadows, no gradients on the mark itself.

Asset delivery: Both marks are delivered as SVG (master), PDF (print), EPS (legacy), and PNG at 1×/2×/3× for every standard size. Pantone matches: *Gold* ≈ PMS 872C (metallic) / PMS 7404C (process). *Navy* ≈ PMS 296C. *Bright Aqua* ≈ PMS 3262C. *Lagoon* ≈ PMS 7717C. *Abyss* ≈ PMS 568C.
